1. Release information

1.1. Features

In the previously delivered Release Note Number "RN-22-0001", we provided the essential update information to build the OTAP System on the TAIT DMR TIER III Trunking System. With a firmware update scheduled in May 2022, KPG-180AP OTAP will equip a new feature for OTAP Manager on the P25 Trunking System.

1.1.1. KPG-180AP OTAP Manager for P25 Trunking System

The previous version of KPG-180AP OTAP Manager Version 4.00 has supported OTAP (Over the Air Programming) on the P25 Trunking System but with this version up, data security is NOW further enhanced as whether the system allows the programming data is accurately determined by confirming whether an SKF file matches Programming data in a terminal used on the P25 Trunking System. The following figure shows a workflow for saving the SKF file, registering terminal data, and operating OTAP.

1.2. Licenses

Please purchase and apply the following License to use P25 Trunking OTAP introduced in this document.

1.2.1. Software License

Software License: Please apply the following license to operate the OTAP on the P25 Trunking System on KPG-180AP.

Model Name	License Key	Description
KPG-180AP	KWD-AP6-P25T	P25 Trunking IP OTAP

2. Compatibility of programming data

2.1. KPG-D1/D1N Programming data

Please make sure to use KPG-D1/D1N in Version 4.60 or later to create programming data of radio used on the currently released KPG-180AP. When you wish to use the data created with KPG-D1/D1N in the version prior to version 4.60, please read the data file with KPG-D1/D1N in Version 4.60 or later and save it again. Also, please store the SKF file used when creating the programming data in a folder set in KPG-180AP.

※Please go to Menu>setup>System Key in KPG-180AP and set a destination to save the SKF file.

3. Product Versions

Please check the newly released versions:

Product	Supported Version in this Release	
	Version	Note
KPG-D1/D1N	V4.60	OTAP (Over the Air Programming) for P25 Trunking System
KPG-180AP	V4.10
